Protection for today, tomorrow and the unexpected

This is a summary of the basic illustration, not a contract. This illustration summary applies to policy form L-10176/ CA 6/17, available in most states, and is not valid unless presented with all pages of the basic illustration.

Not a bank or credit union deposit, obligation or guarantee	May lose value
Not FDIC or NCUA/NCUSIF insured	Not insured by any federal government agency

Life illustration summary

Accumulator Ascent IUL

My planned premium is:
\$350,000 annually

*Protection for today, tomorrow
and the unexpected*

Death benefit

I want to help provide for the people and causes I care about.

When I pass away, my beneficiaries will receive a tax-free¹ death benefit of:

\$20,000,000²

Available funds

I want access to extra money to supplement retirement and other future needs.

The projected cash value³ I can access from my policy is:

Age 65 | \$12,039,137

Age 70 | \$17,058,213

Age 75 | \$24,343,766

Age 80 | \$34,747,489

Living benefits

If I get sick, I want access to cash or other benefits and services.

If certified by a licensed health provider for a qualifying event or illness,⁴ my projected cash benefits are:

Chronic Illness: \$500,000 lump sum

Terminal Illness: \$500,000 lump sum

Chronic Care Advantage: Not Available in CA⁵

Cancer Care CompassSM: Not Available in CA⁶

Benefits and values shown above are not guaranteed. Actual results may be more or less favorable.

This is a summary of the basic illustration, not a contract. This illustration summary applies to policy form L-10176/CA 6/17, available in most states, and is not valid unless presented with all pages of the basic illustration.

Please refer to the basic illustration for guaranteed elements and other important information.

¹ In most instances, life insurance proceeds are not subject to federal income taxes.

² Initial death benefit is displayed. The death benefit is subject to change based on features and other conditions of the policy.

³ Projected cash value is based on non-guaranteed elements and is subject to change.

⁴ Refer to the Benefits Information, Optional Illustrated Benefits and Benefits Included at No Additional Premium sections within this illustration for details on each rider.

⁵ Recertification is required every 12 months.

⁶ This is the maximum benefit available and may be lower based on qualifications.

Why Symetra

indexed universal life insurance?

Death benefit proceeds

Your death benefit can help ensure your family or business is protected when you're gone. It can be used to help with burial expenses, to pay a mortgage, fund a buy-sell agreement, or for daily living expenses.

Death benefits are usually received tax free by your beneficiaries.

Cash value growth potential

Our diverse, index-linked crediting strategies offer the potential to accumulate more cash value to supplement retirement and other future income needs. Each index strategy provides a minimum index crediting rate or "floor," so you'll never lose value based on market performance.

Policy flexibility

You can customize your coverage amount, policy duration and premium payments to fit your needs. You also have access to optional riders that can add further benefits to your policy.

This is a summary of the basic illustration, not a contract. This illustration summary applies to policy form L-10176/CA 6/17, available in most states, and is not valid unless presented with all pages of the basic illustration.

Putnam Dynamic Low Volatility Excess Return Index

Ticker: **PDLV5E**

Factsheet as of September 30, 2024

FRANKLIN
TEMPLETON

Index Overview

A rules-based index that seeks to avoid unwanted surprises, the Putnam Dynamic Low Volatility Excess Return Index combines U.S. stocks, Treasury bonds, and cash asset classes to pursue attractive risk-adjusted returns. On a daily basis, the Index can flex and rebalance, targeting volatility centered around 5%.

Pursues consistent returns with a simple mix of stocks, bonds, and cash asset classes and a dynamic process that aims to control volatility.

Seeks out low-volatility stocks of large U.S. companies that have better historical risk-adjusted returns than the S&P 500 Index.

Dynamic daily rebalancing to target 5% volatility, seeking both growth and protection as markets demand.

Average Annual Total Returns (%)

	1-Yr	3-Yr	5-Yr	10-Yr	Inception	Inception Date
Putnam Dynamic Low Volatility Excess Return Index	5.93	-2.60	-1.03	2.87	4.01	12/29/1989

Cumulative Total Returns (%)

	3-Mth	YTD	2023	2022	2021	2020	2019	2018	2017	2016	2015	2014
Putnam Dynamic Low Volatility Excess Return Index	4.15	3.01	-2.21	-11.62	3.13	4.04	11.62	-0.34	12.81	4.21	1.11	9.74

Performance data quoted represents hypothetical and past performance, which does not guarantee future results. Current performance may differ from figures shown. Hypothetical back-test for illustrative purposes only. The Putnam Dynamic Low Volatility Excess Return Index performance and weights data are based on back-tested data prior to the actual launch of the index. The Putnam Dynamic Low Volatility Excess Return Index back-test inception is December 29, 1989. **All information for the index and any growth prior to its launch date is back-tested, based on the methodology that was in effect on the launch date of June 24, 2020.**

The performance of the Index may include certain embedded transaction costs but does not include fees or costs of any financial instrument referencing the Index. This "embedded index cost" will reduce any change in index value over the index term that would otherwise have been used in the calculation of index interest and it funds certain operational and licensing costs for the index. It is not a fee paid by you. **Please see disclosures on page 2.**

Constituent Allocations (% of Total)

Index weights for last 10 years. All information for the Index prior to its launch date is back-tested, based on the methodology that was in effect on the launch date on June 24, 2020. Weightings are based on total index, are subject to change at any time, and are provided for informational purposes only. Not to be construed as a recommendation to purchase or sell any security.

Design Team

Franklin Templeton Investment Solutions translates a wide variety of investor goals into portfolios powered by Franklin Templeton's best thinking around the globe. The team includes more than 100 investment professionals, specializing in strategic asset allocation and tactical positioning, fundamental and quantitative research, active integration, and risk management.

Index Risks

Stock prices fluctuate, sometimes rapidly and dramatically, due to factors affecting individual companies, particular industries or sectors, or general market conditions. Bond prices generally move in the opposite direction of interest rates. Thus, as the prices of bonds adjust to a rise in interest rates, the performance of the Index may decline. During times of extreme market volatility, the Index will not be able to eliminate market losses or capture all market gains.

Important Information

It is not possible to invest directly in an index. There is no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. There is no guarantee that any strategies utilizing the Index will be effective or successful. Multi-asset indices and diversification do not promise any level of performance, success, or guarantee against loss of principal. This does not serve as an offer to sell or a solicitation of an offer to buy any product or security or the use or suitability of the Index. This information should not be relied upon as investment advice, research, or a recommendation by Franklin or Putnam regarding (i) any products tied to the Index, (ii) the use or suitability of the Index or (iii) any security in particular.

Any information, statement or opinion set forth herein is general in nature, is not directed to or based on the financial situation or needs of any particular investor, and does not constitute, and should not be construed as, investment advice, forecast of future events, a guarantee of future results, or a recommendation with respect to any particular security or investment strategy or type of retirement account. Individuals seeking financial advice regarding the appropriateness of investing in any securities or investment strategies should consult their financial professional.

Index Information

The Putnam Dynamic Low Volatility Excess Return Index™ (the "Index") is the property of Putnam Investments ("Putnam"), a Franklin Templeton company ("Franklin"), which has contracted with S&P Opco, LLC (a subsidiary of S&P Dow Jones Indices LLC) to calculate and maintain the Index. The Index is not sponsored by S&P Dow Jones Indices, their affiliates or their third-party licensors (collectively, "S&P Dow Jones Indices"). Franklin and S&P Dow Jones Indices (collectively, "Index Parties") will not be liable for any errors, omissions or interruptions in calculating the Index. The Index Parties make no representations or warranties, express or implied and shall have no liability with respect to the adequacy, accuracy, timeliness and/or completeness of the Index. Products based on the Index are not sponsored, endorsed, sold or promoted by the Index Parties and the Index Parties have no responsibilities, obligations or duties to purchasers of such products. Franklin Templeton®, Franklin®, Putnam Dynamic Low Volatility Excess Return Index™ and the corresponding logos are trademarks of Franklin or Putnam, a Franklin Templeton company. S&P® is a registered trademark of Standard & Poor's Financial Services LLC, and Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC.

The Index is an excess return index. The Index levels represent performance in excess of the U.S. Treasury 13-Week Bill High Discount Rate. The Index levels reflect the daily deduction of a fee at a rate of 0.50% per annum. This "embedded index cost" will reduce any change in index value over the index term that would otherwise have been used in the calculation of index interest, and it funds certain operational and licensing costs. It does not include fees or costs of any financial instrument referencing the index.

The Putnam Dynamic Low Volatility Excess Return Index™ (PDLV5E) is available within select products issued by Symetra Life Insurance Company.

"Volatility Control" Indices are designed to shift allocations, based on signals in the market, to help keep volatility at or near the stated target. When market volatility is relatively low the index will likely maintain exposure to riskier assets, such as equities. When volatility increases, the index is likely to reallocate so that it is weighted toward low-risk assets, such as cash.

Index-linked annuities are insurance contracts issued by an insurance company. Index-linked annuities are not invested in the Index itself, but rather interest is credited based on the performance of the Index and the rules prescribed in the insurer's Index crediting strategy. Index-linked annuities are not issued by Franklin.

Hypothetical and Live Performance

Any data for the period prior to index inception consists of pre-inception data calculated by retroactively applying the Index methodology. Simulated returns and pre-inception data are hypothetical and included for illustrative purposes only. Performance is based on hypothetical returns prior to index inception and actual returns thereafter.

The Index was created on June 24, 2020. Levels for the Index prior to June 24, 2020 represent hypothetical data determined by retroactive application of a back-tested model, itself designed with the benefit of hindsight. Actual performance will vary, perhaps materially, from the performance set forth herein.

The performance of the Index may include certain embedded transaction costs but does not include fees or costs of any financial instrument referencing the Index.

Hypothetical performance results may have other inherent risks. No representation is being made that any account will or is likely to achieve profit or loss. The relevant market and economic conditions that prevailed will not necessarily reoccur. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be accounted for. All hypothetical results are presented for illustrative purposes only. **Hypothetical and past performance is no guarantee of future performance.**

Back-testing and other statistical analysis material that is provided in connection with the Index use simulated analysis and hypothetical circumstances to estimate how it may have performed prior to its actual existence. The results obtained from "back-testing" information should not be considered indicative of the actual results that might be obtained from an investment or participation in a financial instrument or transaction referencing the Index. Neither Putnam nor Franklin nor S&P Dow Jones Indices provide assurance or guarantee that the products linked to the Index will operate or would have operated in the past in a manner consistent with these materials. The hypothetical historical levels have inherent limitations. Alternative simulations, techniques, modeling or assumptions might produce significantly different results and prove to be more appropriate. Actual results will vary, perhaps materially, from the simulated returns presented in this document.

The hypothetical performance information presented herein does not reflect the results of actual trading and calculation of the Index levels and performance do not reflect the fees and expenses that an investor would pay. These fees and expenses would cause the actual and back-tested performance of the Index to be lower.

Sample, CA 00000

(000) 000-0000

sample@sample.com

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Life Insurance that offers death benefit protection and future income potential

At its core, Symetra Accumulator Ascent IUL 2.0 is designed to provide income-tax-free death benefit coverage. However, it is also designed to enhance policy value growth through our index crediting strategies, potentially providing tax-advantaged supplemental income.

Although proceeds of life insurance are generally received income-tax-free by beneficiaries, estate and local taxes may apply. Consult your attorney or tax professional for more information.

- ✓ **Policy Value Growth Potential:** Nine index crediting strategies are available so you can participate in the growth of a rising market but are protected from the loss of a negative market.
- ✓ **Putnam Dynamic Low Volatility Excess Return Index with Bonus Strategy:** Provides a lower participation rate than the Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy but applies an additional index credit rate to the Policy Value upon maturity of the index segment. This additional index credit rate is used to determine the additional index credit amount (bonus) and is in addition to any other index credits earned. Only allocations to this Putnam Dynamic Low Volatility Excess Return Index with Bonus Strategy will be eligible to receive this additional index credit amount. The additional index credit rate which determines the bonus is currently 1.00% but will never be less than the Guaranteed Minimum Additional Index Credit Rate shown in the policy. Election of this Putnam Dynamic Low Volatility Excess Return Index with Bonus Strategy does not guarantee a greater Policy Value credit than other index strategies.
- ✓ **Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy:** Provides a higher participation rate than Putnam Dynamic Low Volatility Excess Return Index with Bonus Strategy. The Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy does not provide an additional index credit amount (bonus). Index credits are determined and credited at segment maturity. Election of a Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy does not guarantee a greater Policy Value credit than other index strategies.
- ✓ **Symetra Allocation Index Strategies:** Are index crediting strategies which allocate the funds automatically to either the S&P 500® index strategy, or the JPMorgan ETF Efficiente® index strategy. Which strategy receives the allocation is based on an external market volatility index known as the Cboe's VIX index or the "VIX". If the VIX is below the VIX Threshold of 16, two business days prior to the Allocation Date, then the Allocation goes fully into the S&P 500® index strategy. If the VIX is equal or above the VIX Threshold of 16, two business days prior to the Allocation Date, then the Allocation goes fully to the JPMorgan ETF Efficiente® index strategy. Once your money has been allocated to either the S&P 500® index strategy or JPMorgan ETF Efficiente® 5 index strategy, it will remain in that index strategy until the segment matures and a new segment is created.
 - Symetra Allocation Index 1-Year Point to Point
 - Symetra Allocation Index 2-Year Point to Point

Election of the Symetra Allocation Index Strategies does NOT guarantee a greater Index credit for any index segment term.

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

✓ **Core Index Strategy with Bonus:** Provides a lower index cap rate than the Core Index Strategies but applies an additional index credit rate to the Policy Value upon maturity of the index segment. This additional index credit rate is used to determine the additional index credit amount (bonus) and is in addition to any other index credits earned. Only allocations to the Core Index Strategy with Bonus will be eligible to receive this additional index credit amount. The additional index credit rate which determines the bonus is currently 0.75% but will never be less than the Guaranteed Minimum Additional Index Credit Rate shown in the policy. Election of the Core Index Strategy with Bonus does not guarantee a greater Policy Value credit than other index strategies. Our Core Index Strategy with Bonus include:

- Nasdaq-100 Index® with Bonus - 1-Year Point to Point

✓ **Core Index Strategies:** Lock-in any interest earnings and help protect against losses in negative markets. Our Core options include:

- S&P 500® Composite Stock Price Index - 1-Year Point to Point
- Nasdaq-100 Index® - 1-Year Point to Point
- JPMorgan ETF Efficiente® 5 Index - 1-Year Point to Point
- Blended S&P 500® Index and JPMorgan Efficiente® 5 Index - 2-Year Point to Point

✓ **Why Index Cap and Participation Rates Can Fluctuate:** Index caps and participation rates are primarily affected by Symetra's fixed income investment portfolio yields and hedging costs for participating in the index strategies. Symetra uses a hedging strategy that purchases option contracts on the selected index. The hedging strategies help support the index strategy's interest crediting rate. Hedging costs change with market conditions and can affect the index caps and participation rates declared by Symetra.

Periods of high fixed income portfolio yields and low hedging costs can produce higher declared index caps and participation rates. Periods of low fixed income portfolio yields and high hedging costs can produce lower declared index caps and participation rates.

✓ **Access:** Through withdrawals and loans, provides access to policy values for future supplemental income needs.

In addition, if facing a terminal illness or chronic illness, your death benefit may be able to provide cash you can use to cover your expenses.

✓ **Guarantees:** Your policy contains a Lookback Guarantee which may provide an increase in policy value, if the average annual percentage rate of any actual index credits, over the respective Lookback Guarantee Period, is less than the average annual percentage rate of any index credits based on the Lookback Guarantee rate, as defined in the policy, per year cumulatively over resetting 8-year periods. The first 8-year period begins at the time your policy is issued and will be recalculated, over an 8-year period, after the previous period has elapsed.

✓ **Charitable Giving Benefit Rider:** For no extra premium, your policy can provide a qualified charity of your choice with an additional benefit of 1% of the base policy specified amount (up to \$100,000) upon the insured's death. This rider is only available at application.

Within this custom-tailored illustration, you'll find information on your premiums and death benefit, as well as detailed projections on how your policy value could potentially grow over time. We've created this illustration to help you and your insurance professional explore what Symetra Accumulator Ascent IUL 2.0 can do for you and the people you care about.

Initial Annual Premium: \$350,000.00

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

You can choose the amount and frequency of your premiums, as long as you have enough Net Surrender Value to cover policy charges. Depending on how your policy performs, you may need to maintain, resume or increase your premium payments in order to continue your death benefit.

Benefits Information

The following benefits are included in this illustration:

- ✓ Accelerated Death Benefit for Terminal Illness Rider (no additional premium) - Form Number L-10166/CA 11/16
- ✓ Accelerated Death Benefit for Chronic Illness Rider (no additional premium) - Form Number L-10168/CA 11/16
- ✓ Overloan Lapse Protection Rider (no additional cost unless exercised) - Form Number L-10186 6/17
- ✓ Charitable Giving Benefit Rider (no additional premium) - Form Number L-10172/CA 11/16
- ✓ No-Lapse Guarantee (no additional cost)

Benefits Included at No Additional Premium

Accelerated Death Benefit for Terminal Illness Rider allows you to access up to \$500,000 of the policy's death benefit while living if a physician determines the insured is terminally ill with less than 12 months to live. The Accelerated Benefit Death payment is discounted by one year of interest guaranteed not to exceed the policy Loan Interest Charged on Borrowed Amounts. Any changes to the death benefit will result in a change to the amount available. L-10166/CA 11/16

Accelerated Death Benefit for Chronic Illness Rider allows you to access up to \$500,000 of the policy's death benefit if the insured is diagnosed with a chronic illness. A licensed health care practitioner must certify the insured is unable to perform, without substantial assistance, at least two of six activities of daily living (bathing, continence, dressing, eating, toileting, and transferring) due to the loss of functional capacity; or has a severe cognitive impairment, requiring substantial supervision to ensure the health and safety of him or herself. You can refer to the Accelerated Benefit Application Disclosure form for complete details. This amount is based on the initial death benefit. Any changes to the death benefit will result in a change to the amount available. L-10168/CA 11/16

The Insured must be re-certified as being Chronically Ill every 12 months, prior to the expiry of the last certification. A written certification shall be renewed every 12 months. If a written certification is not renewed within 12 months, the Insured must obtain a new certification as described in this section before making a new claim for an Accelerated Death Benefit under this Rider.

Important note:

There is no restriction on the use of proceeds of these accelerated death benefits when the insured has become chronically ill or otherwise eligible for benefits from a qualified event.

This is a life insurance benefit that also gives you the option to accelerate some or all of the death benefit in the event that you meet the criteria for a qualifying event described in the policy. This policy or certificate does not provide long-term care insurance subject to California long-term care insurance law. This policy is not a California Partnership for Long-Term Care program policy. This policy is not a Medicare supplement (policy).

The benefits provided by the Accelerated Death Benefit for Chronic Illness Rider are not intended to provide, and will never provide long-term care insurance, nursing home insurance, or home care insurance. If you are interested in long-term care or nursing home or home care insurance, you should consult with an insurance producer licensed to sell that insurance, inquire with the insurance company offering the accelerated death benefits, or visit the California Department of Insurance Internet Web site (www.insurance.ca.gov) section regarding long-term care insurance.

If you choose to accelerate a portion of your death benefit, doing so will reduce the amount that your beneficiary will receive upon your death.

The benefits payable under this rider are intended to qualify as accelerated death benefits under section 101(g) of the Internal Revenue Code of 1986, as amended (the "Code"). These benefits are not intended to qualify as long-term care insurance under section 7702B of the Code. Payment of the accelerated death benefit is not conditioned on the receipt of long-term care or medical services. There is no restriction on the use of these accelerated death benefits.

The receipt of an accelerated death benefit may be taxable to you, if the benefit does not satisfy all qualification requirements under the Code or to the extent it exceeds the maximum per diem limit under section 101(g) of the Code. Additionally, the receipt of this benefit will reduce the amount your beneficiary(ies) will receive upon your death. Prior to electing to buy the accelerated death benefit, you should seek assistance from a qualified tax professional.

You should be aware that there are differences between Accelerated benefits and long term care. Accelerated Death Benefit (ABR) Riders are supplemental benefits that can be added to a life insurance policy. Receipt of benefits may reduce the death benefit, cash value, loan value, and premiums on the life insurance and may reduce or eliminate the availability of other policy riders/benefits. The amount of Accelerated Benefit available will depend on the life insurance death benefit at the time the Benefit is claimed. If no claim is made for the Accelerated Death Benefit and the policy is in force, the policy death benefit remains available.

Long-term care (LTC) insurance is not life insurance, and as such, has no death benefit or cash value. LTC insurance benefits are specified at the time of the contract. LTC benefits are paid as a form of expense reimbursement for qualified long term care expenses. By comparison, since ABR benefits can be used for any reason, they are paid once qualifications are met, and do not require you to provide receipt of specific expenses to qualify for the benefit. LTC premiums vary based on the level and length of benefit chosen by the policyholder. Premiums are paid on a recurring basis, and failure to pay premiums will generally lapse the policy. If LTC benefits are not claimed, they are typically forfeited. LTC insurance policies may offer non-forfeiture benefits for additional premium.

All Accelerated Death Benefit provisions are renewable for the life of the life insurance policy, provided the premiums are paid on time.

If you are paid a benefit under this rider, your policy's Death Benefit, Net Surrender Value, and available loan value will be reduced. In addition, you may lose your right to receive certain public funds such as Medicare, Medi-Cal, Medicaid, Social Security, Supplemental Security Income (SSI), and possibly others. Prior to electing to buy the accelerated death benefit, you should consult with the appropriate social services agency concerning how receipt of accelerated death benefits may affect that eligibility.

YOU SHOULD CONSULT WITH YOUR PERSONAL TAX OR LEGAL PROFESSIONAL BEFORE CLAIMING A BENEFIT UNDER THIS RIDER.

Overloan Lapse Protection Rider protects your policy from inadvertently lapsing and potentially losing its favorable life insurance tax treatment when an outstanding loan balance nears the policy value. L-10186 6/17

Symetra Life Insurance Company will notify you in writing of your option to exercise the rider when qualifications are met. When exercised, no further premium payments or loan repayments are due and your policy will not lapse. Additional loans and withdrawals are no longer available.

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Qualifying conditions:

- When the policy value multiplied by the applicable IRS Guideline factor exceeds your death benefit as detailed in your policy.
- The insured is at least 75 years of age.
- The policy is in-force for at least 15 years.
- Loan amount must exceed the smaller of either: [a] 93% multiplied by the policy value, or [b] (100% - applicable Overloan Protection Exercise Charges) multiplied by the policy value.

Exercising the rider option:

- Rider must be exercised in writing.
- Death benefit option is level specified amount. If currently not level, it will be changed to level.
- Policy loan type is standard. If currently not standard, it will be converted to standard.
- One-time charge is deducted from the policy value when exercised.
- Unloaned policy value will be moved to the fixed account.
- Once exercised, the rider cannot be reversed.

Neither the IRS nor the courts have ruled on the tax consequences of exercising the Overloan Lapse Protection Rider. It is possible that the IRS or a court could assert that the Policy has been effectively terminated and that the outstanding loan balance should be treated as a distribution, all or a portion of which could be taxable when the Rider is exercised. In addition, this Overloan Protection Rider may not be appropriate for your particular circumstances. Consult with a tax professional regarding the risks associated with exercising this rider.

Charitable Giving Benefit Rider pays an additional benefit of \$100,000 to a qualified charity of your choice upon the death of the insured. This amount is based on the initial death benefit. Any changes to the death benefit will result in a change to the amount available. L-10172/CA 11/16

No-Lapse Guarantee guarantees that the policy will remain in-force for 20 years as long as a premium of \$239,919.96 is paid annually.

A rider is a provision of the policy that may have additional costs, limitations, potential benefits and features that should never be confused with the base policy itself. Before evaluating the benefits of a rider, carefully examine the policy to which it is attached.

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Index Strategies

Symetra Accumulator Ascent IUL 2.0 is designed to maximize your policy's growth and income potential through our Index Strategies. Each index strategy provides a guaranteed minimum crediting rate so you'll never have negative returns in a down market. Plus, any index-linked gains your policy value receives are locked-in and shielded from market declines in the future. You may elect to choose from two Putnam Dynamic Low Volatility Excess Return Index strategies, two Symetra Allocation Index strategies, one Core Index Strategy with Bonus and four Core Index strategies.

Putnam Dynamic Low Volatility Excess Return with Bonus Strategy: Provides a lower participation rate than the Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy but applies an additional index credit rate to the Policy Value upon maturity of the index segment. This additional index credit rate is used to determine the additional index credit amount (bonus) and is in addition to any other index credits earned. Only allocations to this Putnam Dynamic Low Volatility Excess Return Index with Bonus Strategy will be eligible to receive this additional index credit amount. The additional index credit rate which determines the bonus is currently 1.00% but will never be less than the Guaranteed Minimum Additional Index Credit Rate shown in the policy. Election of this Putnam Dynamic Low Volatility Excess Return Index with Bonus Strategy does not guarantee a greater Policy Value credit than other index strategies.

Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy: Provides a higher participation rate than Putnam Dynamic Low Volatility Excess Return Index with Bonus Strategy. The Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy does not provide an additional index credit amount (bonus). Index credits are determined and credited at segment maturity. Election of a Putnam Dynamic Low Volatility Excess Return Index with High Participation Rate Strategy does not guarantee a greater Policy Value credit than other index strategies.

Symetra Allocation Index Strategies: Are index crediting strategies which allocate the funds automatically to either the S&P 500® index strategy, or the JPMorgan ETF Efficient® index strategy. Which strategy receives the allocation is based on an external market volatility index known as the Cboe's VIX index or the "VIX". If the VIX is below the VIX Threshold of 16, two business days prior to the Allocation Date, then the Allocation goes fully into the S&P 500® index strategy. If the VIX is equal or above the VIX Threshold of 16, two business days prior to the Allocation Date, then the Allocation goes fully to the JPMorgan ETF Efficient® index strategy. Once your money has been allocated to either the S&P 500® index strategy or JPMorgan ETF Efficient® 5 index strategy, it will remain in that index strategy until the segment matures and a new segment is created.

- ✓ Symetra Allocation Index 1-Year Point to Point
- ✓ Symetra Allocation Index 2-Year Point to Point

Core Index Strategy with Bonus: Provides a lower index cap rate than the Core Index Strategies but applies an additional index credit rate to the Policy Value upon maturity of the index segment. This additional index credit rate is used to determine the additional index credit amount (bonus) and is in addition to any other index credits earned. Only allocations to the Core Index Strategy with Bonus will be eligible to receive this additional index credit amount. The additional index credit rate which determines the bonus is currently 0.75% but will never be less than the Guaranteed Minimum Additional Index Credit Rate shown in the policy. Election of the Core Index Strategy with Bonus does not guarantee a greater Policy Value credit than other index strategies. Our Core Index Strategy with Bonus include:

- ✓ Nasdaq-100 Index® with Bonus - 1-Year Point to Point

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Our Core strategies: Offer you the option to select from four index strategies, including:

- ✓ S&P 500® Composite Stock Price Index - 1-Year Point to Point
- ✓ Nasdaq-100 Index® - 1-Year Point to Point
- ✓ JPMorgan ETF Efficiente® 5 Index - 1-Year Point to Point
- ✓ Blended S&P 500® Index and JPMorgan ETF Efficiente® 5 Index - 2-Year Point to Point

Because Symetra Accumulator Ascent IUL 2.0 is not an investment contract, net premium is not directly invested in the market or any index strategy.

Creating Index Segments

When you pay a premium, a premium charge is subtracted from your premium, resulting in what is called net premium. The net premium stays in the Holding Account, along with interest earned, if any, during the period as well as any standard loan repayments made. On the next monthly allocation date, the amount in the Holding Account is allocated to the fixed account and/or index strategies, based on your chosen allocation. Any amount you have allocated to an index strategy creates an index segment. Once an index segment has been created, you may not transfer out until the end of the segment term. At the end of the segment term, a new segment will be created based on your current allocation.

Calculating Index Credits

An index strategy credits interest by measuring the percentage difference between values of the measuring index(es) (S&P 500®, for example) at the start and end of the segment term, then applying any applicable index cap, spread, floor and participation rate.

Each index segment has its own index crediting method, index value, index cap, index floor, index participation rate, index segment term, and index start and maturity date. The index caps, floors and participation rates after the initial index segment term may be higher or lower than the initial rates, but will never be less than the guaranteed minimums shown in the policy. The index spreads after the initial index segment term may be higher or lower than the initial spreads, but will never be higher than the guaranteed maximum shown in the policy. The segment cap, spread, floor and participation rates shown in this illustration are as of 9/10/2025.

Index Cap: The maximum interest rate a segment will be credited. If the measuring index's performance is greater than the cap, the segment interest rate will equal the cap.

Index Floor: The minimum interest rate a segment will be credited. If the measuring index's performance is less than the floor, the segment interest rate will equal the floor.

Index Participation Rate: This rate describes how much of the change to the index(es) that you "participate" in.

Index Spread Rate: The index spread rate, if applicable, is a rate used to determine the final Index Credit. The index spread rate must be exceeded by the index in order to earn any Index Credits.

Hypothetical Returns by Strategy

The historical rates shown below are determined by applying the current index cap, index floor and participation rate to the most recent 25 full calendar years of historical index performance. If no index value was published on the beginning and end dates of the calendar year, then the most recent previous index value was used to determine the historical rates.

IMPORTANT NOTE: The Putnam Dynamic Low Volatility Excess Return Index launched April 2020. Values in this illustration are based on hypothetical back-tested performance prior to this date. Back-testing uses simulated analysis and hypothetical circumstances to estimate how the index may have performed prior to its actual existence. Index performance calculated by back-testing is purely theoretical. The hypothetical back-tested performance in this illustration has not been verified by an independent third party. Neither Symetra nor Putnam makes any representation that the index will perform as represented in this illustration.

IMPORTANT NOTE: The JPMorgan ETF Efficiente® 5 Index launched on October 29, 2010. Values in this illustration are based on a combination of actual index performance after this date and hypothetical back-tested performance prior to this date. Back-testing uses simulated analysis and hypothetical circumstances to estimate how the index may have performed prior to its actual existence. Index performance calculated by back-testing is purely theoretical. The hypothetical back-tested performance in this illustration has not been verified by an independent third party. Neither Symetra nor JPMorgan makes any representation that the index will perform as represented in this illustration.

The actual credited rates will vary based on the actual change in the index and actual declared cap and participation rate within each index segment. These figures do not represent actual interest that would have been credited because the index cap and participation rate would have changed over time and actual results would have been different. There are administrative, cost of insurance and product charges associated with the Symetra Accumulator Ascent IUL 2.0 policy. The historical returns by strategy do not reflect these charges. It is not meant to predict future performance.

Initial Death Benefit: \$20,000,000

The Maximum Illustrated Rate for each strategy is calculated by a method consistent with applicable regulations. The Averages are based on the past 20 and 25 years of performance starting on 1/1/2000, using the current index cap, index floor and index participation rate. A number of different reasonable methods may be used to calculate the averages. The maximum illustrated rates and averages are not an indication of future performance and are not guaranteed.

Putnam Dynamic Low Volatility Excess Return Index	Maximum Illustrated Rate	10-Year Average	20-Year Average	25-Year Average

It is Symetra's goal to be able to allow you to better understand and compare index account performance against other indexed universal life products that you may be considering purchasing. Along the same lines, Symetra's Accumulator Ascent IUL 2.0 product must be compliant with all applicable industry illustration guideline(s). To that note, we follow a regulatory illustration concept known as the *Benchmark Index Account*, which is derived under the following industry consistent approach:

- Looking back at the historical period of S&P 500 index returns (excluding dividends) over the previous 66 years, starting with the current calendar year
- Incorporating the product's current participation rate, index cap and index floor for the product's account (or equivalent account)
- Calculating the arithmetic average of all 25-year previous periods of time, inclusive of every trading day throughout this time period (which covers over 10,000 specific points in time)

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

From this, the maximum crediting rate that is allowed to be shown on your illustration is determined as shown above, along with the minimum and maximum rates derived under this calculation, which is required to also be provided for reference purposes:

Maximum Illustrated Rate	8.54%
Minimum Illustrated Rate	5.72%

Policy Details

About this illustration

Symetra Accumulator Ascent IUL 2.0 is a Flexible Premium Adjustable Life Insurance Policy with Index-Linked Interest Option issued by Symetra Life Insurance Company (SLIC), 777 108th Avenue NE, Suite 1200, Bellevue, WA 98004.

This illustration explains the elements of the policy you are applying for. Many features of this illustration, including but not limited to, amount and frequency of premiums, death benefit amounts and interest rate, have a material impact on the policy. You should request different scenarios to see how each feature can impact the values shown.

This is an illustration only. An illustration is not intended to predict actual performance. Interest rates or values that are set forth in the illustration are not guaranteed, except for those items clearly labeled as guaranteed.

This illustration assumes that the currently illustrated non-guaranteed elements used will not change for all years shown. This is not likely to occur, and actual results may be more or less favorable than those shown. Assumptions on which non-guaranteed elements are based are subject to change.

Underwriting

Your actual risk class will depend on the outcome of underwriting. Illustrated values will be impacted if your actual risk class is different.

Net Death Benefit

Initial: \$20,000,000

Death Benefit Option A:
Level

This is the amount your beneficiaries will receive upon the death of the insured. The death benefit option you select will have an impact on the amount received. The net death benefit is reduced by any loans and loan interest.

Premium

Initial: \$350,000

Frequency: Annual

This is the amount you plan to pay each year. The illustration shows premium payments paid on the first day of each payment period. We reserve the right to require additional underwriting if the premium will result in an immediate increase in the difference between the death benefit and the policy value.

The amount required to place the policy in-force is \$59,979.99. You will not be billed for remainder of the initial premium. Payment of less than the illustrated initial premium you selected, even if the remainder of the initial premium is subsequently submitted, could result in earlier lapse and generally lower cash values than those illustrated.

Premium Allocation

When you pay a premium, a premium charge is subtracted from your premium. You may allocate your net premium payment to the fixed account and/or any of the index strategies that we make available to you.

You have elected that your premiums be allocated as follows:

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Putnam Dynamic Low Volatility Excess Return Index	Percentage	From	Through
With Bonus	0.00%	1	80
With High Participation Rate	0.00%	1	80
Symetra Allocation Index Options	Percentage	From	Through
1-Year Point to Point	0.00%	1	80
2-Year Point to Point	0.00%	1	80

Please note, Symetra will issue your policy with the index selection options chosen by you in the Index Coverage Details of the supplemental application, which may be different from those index allocations shown in this sales illustration. It is recommended You request a sales illustration which corresponds to Your selected index allocations in the application supplement.

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Index Segment Interest Rate

The illustrated interest rates for the index segments are as follows:

Putnam Dynamic Low Volatility Excess Return Index	Rate	From	Through
With Bonus	0.00%	1	80
With High Participation Rate	0.00%	1	80
Symetra Allocation Index	Rate	From	Through
1-Year Point to Point	0.00%	1	80
2-Year Point to Point	0.00%	1	80
Core Index Strategy with Bonus	Rate	From	Through
Nasdaq-100 Index® with Bonus	6.71%	1	80
Core	Rate	From	Through

JPMorgan ETF Efficient® 5 Index	0.00%	1	80
Blended S&P 500® Index and JPMorgan ETF Efficient® 5 Index	0.00%	1	80

Fixed Account

The fixed account earns interest at a declared rate. The fixed account interest rate will never be less than the guaranteed minimum interest rate.

Fixed Account	Illustrated Rate	From	Through
	5.25%	1	80

Lookback Guarantee

Your policy contains a Lookback Guarantee which may provide an increase in policy value, if the average annual percentage rate of any actual index credits, over the respective Lookback Guarantee Period, is less than the average annual percentage rate of any index credits based on the Lookback Guarantee rate, as defined in the policy, per year cumulatively over resetting 8-year periods. The first 8-year period begins at the time your policy is issued and will be recalculated, over an 8-year period, after the previous period has elapsed.

Policy Value & Net Surrender Value

The policy value consists of your net premiums, minus monthly deductions and withdrawals, plus any interest.

The Net Surrender Value is the amount available to you upon surrender and the amount available for loans and withdrawals. The Net Surrender Value is the policy value minus any surrender charges, loans and loan interest. Surrender charges are applicable for 10 years from issue.

Loans and Withdrawals

Loans are available immediately, as long as you have sufficient Net Surrender Value. There are 2 types of loans available: standard loans and participating loans.

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Loan Type	Policy Value	Loan Interest Credited	Loan Interest Charged
Standard	Value is transferred to a loan account.	Fixed interest rate	Fixed loan rate
Participating	Value that serves as participating for the loan remains in the index account(s) and/or the fixed account.	Credited based on the performance of the index account(s) and/or fixed account.	Fixed loan rate

Only one type of loan is allowed at a given time. You can switch between loan types once per year on the policy anniversary.

Participating loans are made available to you. All such loans will remain in the Index Strategies that you have chosen and will be charged at a fixed interest rate determined by Symetra.

Standard Loan Current Loan Interest Charge Rate: 4.25%

Standard Loan Guaranteed Loan Interest Charge Rate: 4.25%

Participating Loan Current Loan Interest Charge Rate: 5.50%

Participating Loan Guaranteed Loan Interest Charge Rate: 5.50%

Guideline Premium Test

Initial Guideline Single

Premium: \$5,006,144

Initial Guideline Annual

Premium: \$326,737

Under a policy that qualifies as life insurance, gain is not taxable as long as it remains in the policy, and the death benefit is excludable from gross income. To qualify as life insurance for federal income tax purposes, the policy must satisfy one of two alternative tests under IRC section 7702. This illustration applies the Guideline Premium Test, which requires generally that the sum of the premiums paid under the policy, less certain withdrawals, at any time must not exceed the greater of the guideline single premium or the sum of the guideline annual premiums at such time and that the death benefit at any time is not less than the applicable percentage of the policy value at that time. Guidelines are calculated at issue, but must be recalculated upon a change in your underwriting risk classification or a change to the coverage of the policy. Failure to qualify as life insurance will result in adverse tax consequences.

MEC Status

Initial Annual Seven Pay

Premium: \$1,313,970

A loan or withdrawal from a life insurance policy generally is excluded from gross income to the extent it does not exceed the investment in the policy. However, if a life insurance policy also is a Modified Endowment Contract (MEC), a loan or withdrawal is includible in income to the extent of any gain on the policy, and an additional tax may apply. The gain is the excess of the policy value over the premiums paid reduced by any prior untaxed distributions and it is determined by aggregating the policy with all other MECs issued to the same policyowner in the same calendar year by affiliated life insurance companies. In general, a life insurance policy will be a MEC if the accumulated premiums paid under the policy at any time during a 7-year testing period exceeds the sum of the annual Seven Pay premiums as of that time, as determined in accordance with the requirements of IRC section 7702A.

Female

Age & Risk Class: Female, Age 40, Preferred Non-Nicotine

Initial Annual Premium: \$350,000

Initial Death Benefit: \$20,000,000

Whether your policy will be a MEC depends on the timing and amount of premiums paid. The payment of premiums may be affected by your policy's features, your exercise of any policy options, and any changes you make to the policy. Whether the illustrated policy will become a MEC depends on the facts and circumstances. If your policy is at risk of becoming a MEC by some action you are about to take, we will notify you and give you an opportunity to avoid MEC treatment by reconsidering such action.

Based on our understanding of current tax laws, a policy issued and maintained consistent with this illustration would not become a MEC.

For tax implications, see your tax or legal professional.

This illustration is not intended as investment, accounting, legal or tax advice and Symetra Life Insurance Company does not give investment, accounting, legal or tax advice. This illustration does not attempt to provide more than general U.S. tax information associated with life insurance policies. This information is written in connection with the promotion or marketing of life insurance issued by Symetra Life Insurance Company.

You should seek advice based on your particular circumstances from an independent tax professional.

This is not a complete description of the Symetra Life Insurance Product. For a more complete description, please ask your insurance producer.

Not a bank or credit union deposit, obligation or guarantee	May lose value
Not FDIC or NCUA/NCUSIF insured	Not insured by any federal government agency

Initial Death Benefit: \$20,000,000

Comparison Indexes

When comparing insurance policies, a simple comparison is not enough. There are a number of other items that must also be taken into consideration. The numbers shown in the Life Insurance Surrender Cost Index and the Life Insurance Net Payment Cost Index are measures of the relative cost of similar policies of insurance and can be used to determine the policy that best meets your needs. A low index number generally represents a lower cost than a higher number. A detailed explanation of the intended use of these indexes is outlined in the *Life Insurance Buyer's Guide* which is provided at the time a life insurance policy is delivered. The guide is also available from your life insurance professional.

The Life Insurance Surrender Cost Index and the Life Insurance Net Payment Cost Index are calculated using a formula prescribed by the National Association of Insurance Commissioners, and reflect a 5.00% interest rate compounded annually.

A zero in the annual premium outlay column means that no premiums were paid in that year; it does not mean that the policy is paid up. Charges will continue to be deducted from the policy value. Depending on actual results, premiums may need to be increased or resumed.

The effective policy loan annual percentage interest rate is determined at time of loan, but will never exceed:

Standard Loan Option Annual Interest Rate: 4.25%

Participating Loan Option Annual Interest Rate: 5.50%

Interest is charged in advance and is due from Owners on each Policy Anniversary for the next Policy Year. If the Owner does not pay such interest when due, the amount of the interest is added to the outstanding Loan Amount. Thus, unpaid interest is charged interest during the subsequent Policy Year.

A zero in the annual premium outlay column means that no premium payments were paid in that year; it does not mean that the policy is paid up. Charges will continue to be deducted from the policy value. Depending on actual results, premium payments may need to be increased or resumed.

This is a supplemental life insurance illustration. Please refer to the basic life insurance illustration for guaranteed elements and other important information. Non-guaranteed elements are not guaranteed and are subject to change. Actual results may be more or less favorable.

Policy Overview

Product Information:

Life Insurance Secondary Guarantee Analysis

Annualized Premium Outlay

Annual outlay net of taxes (Tax on Withdrawal and MEC Loan).

Guaranteed Values

Net Surrender Value

Policy's guaranteed cash value.

Net Death Benefit

Policy's guaranteed death benefit.

Non-Guaranteed Values

Net Surrender Value

Gross Cash Value net of Loans and Withdrawals.

Net Death Benefit

Gross Death Benefit net of Loans and Withdrawals.

Illustration Concept:
Secondary Guarantee

The Secondary Guarantee Concept illustrates the duration of the Guaranteed Death Benefit based on the specified premium payments. The Non-Guaranteed values are also provided for comparison purposes.

Generally, the idea of "Secondary Guarantees" provides a guaranteed death benefit for a specified period of time at a relatively low premium. As long as the specified premium payments are made, the life insurance policy is guaranteed to continue in-force.

Please refer to the Basic Ledger for a complete description of both guaranteed and non-guaranteed values, including definitions of the cash value and death benefit columns.
